1.3 Conflictos

Como podemos observar en la tabla de decisión no hay ningún conflicto. Los posibles conflictos son:

Reducción-Reducción

Podemos ver como en los posibles estados con este conflicto, S...., se verifica que $\forall \{A \to \alpha \bullet, B \to \beta \bullet\} \subset S_x \Rightarrow \text{Follow}(A) \cap \text{Follow}(B) = \emptyset$ (Esto lo podemos observar al no tener dos entradas de reducción en la misma celda de cada fila de S_x)

Reducción-Desplazamiento

Podemos ver como en los posibles estados con este conflicto, S...., se verifica que $\forall \{A \to \alpha \bullet b \gamma, C \to \beta \bullet\} \subset S_x \Rightarrow b \notin Follow(C)$ (Esto lo podemos observar al no tener una entrada de desplazamiento y otra de reducción en la misma celda de cada fila de S_x)
